

Request Manager Entity Relationship Diagram

Constraints

- each client can have multiple requests
- each request can only have one client
- each product can be in multiple requests
- each request can only have one product
- if each request could have multiple products use a join table with the product & request primary keys
- each client can have multiple requests
- each request can only have one client
- product names may change
- client names may change (mergers, acquisitions)
- client names are business names. business names are atomic. if people instead of business names split it separate "first_name" and "last_name" fields to be atomic
